teddy.

beauty booking platform

FEATURES & REQUIREMENTS

Client (User) App

React Native / Expo SDK 54 — iOS, Android & Web

The Teddy Client App is the consumer-facing surface that allows end-users to discover beauty vendors, book and pay for services, earn loyalty rewards, and communicate with their salon — all in one mobile-first experience.

Functional Features

Authentication & Onboarding

Register with email & password	Create an account with first name, last name, email, phone, and a strong password.
Login with email & password	Secure session creation using RS256 JWT access + refresh token pair.
Google OAuth login	One-tap sign-in via Google Identity using google-auth-library; account linked automatically.
Phone OTP login	Receive a one-time passcode via SMS (Twilio in production, console-mocked in dev) to authenticate.
JWT token refresh	Silent token rotation using the refresh-token endpoint; access tokens expire in 15 minutes.

Logout	Invalidates the refresh token server-side and clears secure local storage.

Vendor & Service Discovery

Location-aware search	Geo-radius search surfaces vendors sorted by distance; Haversine post-filter applied on results.
Full-text search	Search by vendor name, service name, or category using Prisma contains with insensitive mode.
Filter & sort	Filter by category, price range, minimum rating, and distance. Sort by rating, price, or distance.
Vendor profile view	View business name, photos, description, services list, staff bios, ratings, and verified reviews.
Service detail view	See service name, duration, price, description, and real-time staff availability.
Browse categories	Categorised browse (Skincare, Nails, Hair, Spa, Massage, etc.) from the home screen.
Wishlist	Save favourite vendors to a personal wishlist for quick future access.

Booking Management

Create booking	Select service, staff member, date & time slot; slot locked in Redis on confirmation.
Pay at booking	Stripe payment intent created at booking time; card charged on payment confirmation.
View bookings	Full history of upcoming and past bookings with status badges and service details.
Cancel booking	Client cancels >24 h before: 100% refund. Within 24 h: 50% refund. Vendor cancel: 100% refund.
Join waitlist	If a slot is fully booked, client joins the waitlist and is auto-promoted when a spot opens.
Waitlist position	View current position in the queue and estimated wait status.
Booking reminders	Automated push notification sent 24 hours before each confirmed appointment.
Real-time status updates	Booking status changes (Confirmed, In Progress, Completed, Cancelled) pushed via Socket.IO.

Payments

Stripe checkout	Encrypted card input via Stripe React Native SDK; PCI-compliant — card data never touches the server.

Payment confirmation	POST /v1/payments/confirm finalises the charge and transitions booking to CONFIRMED.
Refunds	Automatic refund initiated server-side on eligible cancellations; credited to original payment method.
Payment status	View payment status and amount for each booking in booking detail screen.

Loyalty Rewards

Earn points	10 points awarded per dollar spent on each successfully completed booking.
Tier progression	Four tiers — Bronze, Silver, Gold, Platinum — each with escalating perks and discount thresholds.
Redeem points	Points redeemable as discount on future bookings at applicable reward rate.
Points history	Chronological ledger of all point earn/redeem transactions.
Tier status	Current tier displayed on profile with progress indicator towards next tier.

In-App Chat

View chat threads	List of all active chat conversations with vendors (vendor-initiated only per business rules).

Send & receive messages	Real-time text messaging via Socket.IO /chat namespace with Redis pub/sub relay.
Before & after photos	View before-and-after photos uploaded by the vendor for a completed booking.
Read receipts	Mark thread as read; unread count badge displayed on chat tab.

Reviews & Ratings

Leave a review	Submit a star rating (1–5) and written review — only available after a completed booking.
View vendor reviews	Read verified client reviews on vendor profiles; average rating displayed prominently.

Profile & Settings

View & edit profile	Update first/last name, phone number, and profile photo.
Avatar upload	Upload profile photo via device camera or gallery; stored via S3 (mocked in dev).
Push notification token	Register Expo push token with the API for targeted notifications.

Notification preferences	Toggle push notifications per category (booking updates, promotions, chat messages).
Delete account	Request account deletion; all personal data removed per privacy policy.

Non-Functional Requirements

Performance	App cold-start under 3 seconds. API responses cached in Redis (TTL 10 min for search, 1 h for profiles). OTA updates via expo-updates for instant bug fixes without store review.
Security	RS256 JWT (access 15 min / refresh 7 days). Tokens stored in expo-secure-store (iOS Keychain / Android Keystore). Rate limiting: 10 auth attempts per 15 min per IP. CORS restricted to known origins.
Reliability	Socket.IO auto-reconnects on network drop. Zustand state persisted to AsyncStorage for offline reading. Background fetch retries failed API calls with exponential backoff.
Cross-Platform	Single React Native codebase targets iOS 16+, Android 10+, and Expo Web. NativeWind v4 ensures pixel-consistent UI across platforms.
Scalability	Stateless API behind load balancer. Redis adapter on Socket.IO for horizontal scaling. Slot-lock TTL (300 s) prevents deadlocks at scale.
Accessibility	VoiceOver / TalkBack labels on all interactive elements. Minimum 44 pt touch targets. Colour contrast ratio "e 4.5:1 across the UI.
Privacy	No analytics SDK on the client by default. Location requested only when searching — not stored. Payment data handled exclusively by Stripe; never logged server-side.

Maintainability	TypeScript strict mode. Zustand stores follow single-responsibility. Axios interceptors centralise auth header injection and 401 handling.
